If you answered Yes to #1 or #2, you may not use Latisse.
If you answered Yes to any part of #3, we recommend that you see your Ophthalmologist to correct and control your symptoms prior to starting Latisse.
If you answered Yes to #4, we recommend that you see your Dermatologist before starting Latisse.

Warnings, precautions and adverse reactions- Use as directed on package insert.

- Do not use Latisse with other medications that lower Intraocular pressure (OIP).
- Continuous contact with your eye may cause permanent iris pigmentation.
- Latisse may cause hyper pigmentation of the eyelid. This is reversible after stopping use.
- It is very important to apply Latisse to the base of the eyelid to reduce the potential of hair growth outside of the treatment area.
- Do not use Latisse if you have macular edema.
- Do not use Latisse if you are pregnant or breast feeding.
- Avoid contaminating Latisse applicators.
- Contacts should not be worn for at least 15 minutes after applying Latisse.
- Red eye or conjunctal hyperemia will usually resolve in a few days to 2 weeks. If it persists or suddenly worsens, discontinue using Latisse.
- Less than 4% of patients experience eye pruritus (itchy), skin hyperpigmentation (darkening), ocular (eye) irritation, dry eye, and/or erythema (redness) of the eyelids.
  - If these symptoms do not resolve within a few days, discontinue use of Latisse and/or see your ophthalmologist.
